

Don't expose yourself...

Think first

- Always wash your hands between patients or when contaminated
- Ensure good skin integrity, or cover with an occlusive, waterproof dressing
- Use appropriate Personal Protective Equipment (PPE) when there is a change of contact, splash or splatter with blood or body substances.
- Safe handling, management and disposal of sharps
- Promote waste segregation
- Effective spills management
- Know how to manage an Occupational Exposure to Blood or body fluids.
